Using Set Notation with Quantifiers

Sometimes we restrict the domain of a quantified statement explicitly by making use of a particular notation. For example, $\forall x \in S (P(x))$ denotes the universal quantification of $P(x)$ over all elements in the set $S$. In other words, $\forall x \in S (P(x))$ is shorthand for $\forall x (x \in S \rightarrow P(x))$. Similarly, $\exists x \in S (P(x))$ denotes the existential quantification of $P(x)$ over all elements in $S$. That is, $\exists x \in S (P(x))$ is shorthand for $\exists x (x \in S \land P(x))$.

**EXAMPLE 19**  What do the statements $\forall x \in \mathbb{R} \, (x^2 \geq 0)$ and $\exists x \in \mathbb{Z} \, (x^2 = 1)$ mean?

**Solution:** The statement $\forall x \in \mathbb{R} (x^2 \geq 0)$ states that for every real number $x$, $x^2 \geq 0$. This statement can be expressed as “The square of every real number is nonnegative.” This is a true statement.

The statement $\exists x \in \mathbb{Z} (x^2 = 1)$ states that there exists an integer $x$ such that $x^2 = 1$. This statement can be expressed as “There is an integer whose square is 1.” This is also a true statement because $x = 1$ is such an integer (as is $-1$).

**Truth Sets of Quantifiers**

We will now tie together concepts from set theory and from predicate logic. Given a predicate $P$, and a domain $D$, we define the **truth set** of $P$ to be the set of elements $x$ in $D$ for which $P(x)$ is true. The truth set of $P(x)$ is denoted by $\{x \in D \mid P(x)\}$.

**EXAMPLE 20**  What are the truth sets of the predicates $P(x)$, $Q(x)$, and $R(x)$, where the domain is the set of integers and $P(x)$ is "$|x| = 1$," $Q(x)$ is "$x^2 = 2$," and $R(x)$ is "$|x| = x$.”

**Solution:** The truth set of $P$, $\{x \in \mathbb{Z} \mid |x| = 1\}$, is the set of integers for which $|x| = 1$. Because $|x| = 1$ when $x = 1$ or $x = -1$, and for no other integers $x$, we see that the truth set of $P$ is the set $\{-1, 1\}$.

The truth set of $Q$, $\{x \in \mathbb{Z} \mid x^2 = 2\}$, is the set of integers for which $x^2 = 2$. This is the empty set because there are no integers $x$ for which $x^2 = 2$.

The truth set of $R$, $\{x \in \mathbb{Z} \mid |x| = x\}$, is the set of integers for which $|x| = x$. Because $|x| = x$ if and only if $x \geq 0$, it follows that the truth set of $R$ is $\mathbb{N}$, the set of nonnegative integers.

Note that $\forall x P(x)$ is true over the domain $U$ if and only if the truth set of $P$ is the set $U$. Likewise, $\exists x P(x)$ is true over the domain $U$ if and only if the truth set of $P$ is nonempty.

**Exercises**

1. List the members of these sets.
   a) $\{x \mid x$ is a real number such that $x^2 = 1\}$
   b) $\{x \mid x$ is a positive integer less than $12\}$
   c) $\{x \mid x$ is the square of an integer and $x < 100\}$
   d) $\{x \mid x$ is an integer such that $x^2 = 2\}$

2. Use set builder notation to give a description of each of these sets.
   a) $\{0, 3, 6, 9, 12\}$
   b) $\{-3, -2, -1, 0, 1, 2, 3\}$
   c) $\{m, n, o, p\}$

3. Determine whether each of these pairs of sets are equal.
   a) $\{1, 3, 3, 5, 5, 5\}$
   b) $\{\{1\}, \{1, 1\}\}$
   c) $\{0\}$

4. Suppose that $A = \{2, 4, 6\}$, $B = \{2, 6\}$, $C = \{4, 6\}$, and $D = \{4, 6, 8\}$. Determine which of these sets are subsets of each other.

5. For each of the following sets, determine whether 2 is an element of that set.
   a) $\{x \in \mathbb{R} \mid x$ is an integer greater than $1\}$
   b) $\{x \in \mathbb{R} \mid x$ is the square of an integer\}
   c) $\{2, [2]\}$
   d) $\{[2], \{2\}\}$
   e) $\{[2], \{2, [2]\}\}$
   f) $\{[[2]]\}$
6. For each of the sets in Exercise 5, determine whether \([2]\) is an element of that set.

7. Determine whether each of these statements is true or false.
   a) \(\emptyset \in \emptyset\)
   b) \(\emptyset \in \{\emptyset\}\)
   c) \(\{\emptyset\} \in \emptyset\)
   d) \(\emptyset \in \{\emptyset\}\)
   e) \(\{\emptyset\} \in \{\emptyset, \{\emptyset\}\}\)
   f) \(\emptyset \in \{\emptyset\}\)
   g) \(\{\emptyset\} \subseteq \{\emptyset\}\)

8. Determine whether these statements are true or false.
   a) \(\emptyset \in \{\emptyset\}\)
   b) \(\emptyset \in \{\emptyset, \{\emptyset\}\}\)
   c) \(\{\emptyset\} \subseteq \{\emptyset\}\)
   d) \(\emptyset \in \{\emptyset\}\)
   e) \(\{\emptyset\} \subseteq \{\emptyset, \{\emptyset\}\}\)
   f) \(\{\emptyset\} \subseteq \{\emptyset, \{\emptyset\}\}\)

9. Determine whether each of these statements is true or false.
   a) \(x \in \{x\}\)
   b) \(\{x\} \subseteq \{x\}\)
   c) \(\{x\} \in \{x\}\)
   d) \(\{x\} \subseteq \{x\}\)
   e) \(\emptyset \subseteq \{x\}\)
   f) \(\emptyset \in \{x\}\)

10. Use a Venn diagram to illustrate the subset of odd integers in the set of all positive integers not exceeding 10.

11. Use a Venn diagram to illustrate the set of all months of the year whose names do not contain the letter \(R\) in the set of all months of the year.

12. Use a Venn diagram to illustrate the relationship \(A \subseteq B\) and \(B \subseteq C\).

13. Use a Venn diagram to illustrate the relationships \(A \subset B\) and \(B \subset C\).

14. Use a Venn diagram to illustrate the relationships \(A \subset B\) and \(A \subset C\).

15. Suppose that \(A, B,\) and \(C\) are sets such that \(A \subseteq B\) and \(B \subseteq C\). Show that \(A \subseteq C\).

16. Find two sets \(A\) and \(B\) such that \(A \in B\) and \(B \subseteq A\).

17. What is the cardinality of each of these sets?
   a) \([-\{a\}\]
   b) \([-\{a\}\]
   c) \([-\{a, \{a\}\}\]
   d) \([-\{a, \{a\}\}\]

18. What is the cardinality of each of these sets?
   a) \(\emptyset\)
   b) \(\emptyset\)
   c) \(\emptyset, \{\emptyset\}\)
   d) \(\emptyset, \{\emptyset\}, \{\emptyset, \{\emptyset\}\}\)

19. Find the power set of each of these sets, where \(a\) and \(b\) are distinct elements.
   a) \([-\{a\}\]
   b) \([-\{a\}\]
   c) \(\emptyset, \{\emptyset\}\)

20. Can you conclude that \(A = B\) if \(A\) and \(B\) are two sets with the same power set?

21. How many elements does each of these sets have where \(a\) and \(b\) are distinct elements?
   a) \(P([a, b, \{a, b\}])\)
   b) \(P([a, b, \{a\}], \{a\})\)
   c) \(P(P(\emptyset))\)

22. Determine whether each of these sets is the power set of a set, where \(a\) and \(b\) are distinct elements.
   a) \(\emptyset\)
   b) \(\emptyset, \{a\}\)
   c) \(\emptyset, \{a\}, \{\emptyset, \{a\}\}\)
   d) \(\emptyset, \{a\}, \{b\}, \{a, b\}\)

23. Let \(A = \{a, b, c, d\}\) and \(B = \{y, z\}\). Find
   a) \(A \times B\)
   b) \(B \times A\)

24. What is the Cartesian product \(A \times B\), where \(A\) is the set of courses offered by the mathematics department at a university and \(B\) is the set of mathematics professors at this university?

25. What is the Cartesian product \(A \times B \times C\), where \(A\) is the set of all airlines and \(B\) and \(C\) are both the set of all cities in the United States?

26. Suppose that \(A \times B = \emptyset\), where \(A\) and \(B\) are sets. What can you conclude?

27. Let \(A\) be a set. Show that \(\emptyset \times A = A \times \emptyset = \emptyset\).

28. Let \(A = \{a, b, c, d\}, B = \{x, y\}\), and \(C = \{0, 1\}\). Find
   a) \(A \times B \times C\)
   b) \(C \times B \times A\)
   c) \(C \times A \times B\)
   d) \(B \times B \times B\)

29. How many different elements does \(A \times B\) have if \(A\) has \(m\) elements and \(B\) has \(n\) elements?

30. Show that \(A \times B \neq B \times A\), when \(A\) and \(B\) are nonempty, unless \(A = B\).

31. Explain why \(A \times B \times C\) and \((A \times B) \times C\) are not the same.

32. Explain why \((A \times B) \times (C \times D)\) and \(A \times (B \times C) \times D\) are not the same.

33. Translate each of these quantifications into English and determine its truth value.
   a) \(\forall x \in R (x^2 \neq -1)\)
   b) \(\exists x \in Z (x^2 = 2)\)
   c) \(\forall x \in Z (x^2 > 0)\)
   d) \(\exists x \in R (x^2 = x)\)

34. Translate each of these quantifications into English and determine its truth value.
   a) \(\exists x \in R (x^2 = -1)\)
   b) \(\exists x \in Z (x + 1 > x)\)
   c) \(\forall x \in Z (x - 1 \in Z)\)
   d) \(\forall x \in Z (x^2 \in Z)\)

35. Find the truth set of each of these predicates where the domain is the set of integers.
   a) \(P(x): x^2 < 3\)
   b) \(Q(x): x^2 > x\)
   c) \(R(x): 2x + 1 = 0\)

36. Find the truth set of each of these predicates where the domain is the set of integers.
   a) \(P(x): x^2 \geq 1\)
   b) \(Q(x): x^2 = 2\)
   c) \(R(x): x < x^2)\)

37. The defining property of an ordered pair is that two ordered pairs are equal if and only if their first elements are equal and their second elements are equal. Surprisingly, instead of taking the ordered pair as a primitive concept, we can construct ordered pairs using basic notions from set theory. Show that if we define the ordered pair \(\langle a, b \rangle\) to be \([[a], \{a, b\}]]\), then \(\langle a, b \rangle = \langle c, d \rangle\) if and only
